The illustration below covers the four stages of a four stroke engine. This may help you understand just how your performance mods and tunings may affect the engine. Why Tune? The objective of tuning is to improve the volumetric efficiency of the engine. In other words, the engine will, after tuning, produce more power from the same displacement.

The proper way to tune a fuel screw is to make adjustments on a fully warmed up engine and at LOW RPM. With engine off, lightly seat the fuel screw and set to factory settings as a baseline (usually around 2 turns out). With engine running at low RPM, turn the screw in clockwise until the engine begins to stumble, then turn the screw counterclockwise until the engine stumbles, noting how many turns in/out both occurred.
