In 1965, Mohawk Data Sciences offered a magnetic tape encoder, described as a punch card replacement. By 1990, the combination of affordable personal computers and "magnetic disk storage" had made punch cards nearly obsolete. In the past, the terms "Data Storage" and "memory" were often used interchangeably. However, at present, Data Storage is an umbrella phrase that includes memory.

The first floppy disk device, the IBM 23FD, and first floppy disk were released by IBM in 1971. The floppy disk is 8 inches in diameter, has a storage capacity of 80 KB, and is read-only. The 23FD is a built-in component of the 2835 Storage Control Unit. 1972: Memorex released a floppy disk drive, called the Memorex 650, in 1972. The 650 floppy diskette can store 175 KB of data and could be used by many devices.

Data storage has been a serious business from the earliest days of computing and remains so to this day. Things have changed though since in the 1950s when IBM launched its 305 RAMAC, which could give you only 3.75MB of storage capacity despite weighing in at over a tonne!

[A Brief History of Data Storage \[Infographic\] - Direct2Deal](#)

The first known form of data storage was invented in 1725 by Frenchman Basile Bouchon. He invented a way to record data to control the weaving patterns of loom using a big loop of paper with precisely punched holes. With further improvements by other inventors, these semi-automated looms sold very modestly.

Data storage is the recording of information in a storage medium. DNA and RNA, handwriting, phonographic recording, magnetic tape, and optical discs are all examples of storage media. Recording may be accomplished with virtually any form of energy. Electronic data storage requires electrical power to store and retrieve data. Data storage in a digital, machine-readable medium is sometimes called digital data. Computer data storage is one of the core functions of a general purpose computer. Electr

[Data storage - Wikipedia](#)

Definition: Information storage is the part of the accounting system that keeps data accessible to the information processors. In other words, an accounting system's information storage unit is either a hard drive or server that usually contains a database.

These first generation self-storage warehouses were created due to the overcrowding of British banking institutions and were utilized to store and protect valuables for clients embarking on lengthy voyages ("Self Storage History."). In the 1850's, self-storage warehouses were built to hold household and personal items, which led to the creation of a warehouse design consisting of a two-story building with packaging on the bottom and personal units up top ("Self Storage History").
