To fix your car's air conditioner, start by turning your car on and checking to see if the air conditioner is producing cold air. If it's not, you may need to fix the cooling fans on your radiator or replace the cabin air filter. You should also check the air conditioner in the engine bay to see if the compressor is running.

Check to make that the 240-volt circuit breaker (double-pole breaker) controlling the air-conditioning compressor/condensing unit and the 120-volt circuit breaker controlling the furnace blower or separate air handler are in the ON positions. If a circuit breaker has tripped or a fuse is blown, then reset the circuit breaker or replace the fuse. If you reset the breaker or replace the fuse and they trip or blow again, stop and call an air-conditioning service technician, as you may have a ...

~~Problems and Repairs for Air Conditioning Systems~~

1. Refer to Workshop Manual (GTR) section 412-00 and recover the Air Conditioning (A/C) system. 2. Refer to Workshop Manual (GTR) section 100-02 and raise and support the vehicle. NOTE: S-TYPE vehicles from VIN M44998 only. 3. For S-TYPE vehicles from VIN M44998 only, refer to Workshop Manual (GTR) section 501-02 and remove the front air deflector.

~~Air Conditioning System Not Cooling Sufficiently~~

Fan cycle switches or defective capacity control valves can cause the TXV to flood the compressor. Check the discharge temperature within twelve inches of the compressor discharge service valve, 200oF is ok, above 200ois in the danger zone for air conditioning applications. Heat pumps and refrigeration applications may be higher.
