Drawing on their decades of teaching experience, William
Briggs and Lyle Cochran have created a calculus text that
carries the teacher's voice beyond the classroom. That voice-
evident in the narrative, the figures, and the questions
interspersed in the narrative-is a master teacher leading
readers to deeper levels of understanding. The authors
appeal to readers' geometric intuition to introduce
fundamental concepts and lay the foundation for the more
rigorous development that follows. Comprehensive exercise

For a three-semester or four-quarter calculus course covering single variable and multivariable calculus for mathematics, engineering, and science majors. Briggs/Cochran is the most successful new calculus series published in the last two decades. The authors' decades of teaching experience resulted in a text that reflects how students generally use a textbook—i.e., they start in the exercises and refer back to the narrative for help as needed. The text therefore builds from a foundation of meticulously crafted exercise sets, then draws students into the narrative through writing that reflects the voice of the instructor, examples that are stepped out and thoughtfully annotated, and figures that are designed to teach rather than simply supplement the narrative.
