Chernobyl And The Safety Of

The disaster at Chernobyl provides some significant insight for the public who are in fear of the dangers of nuclear power. The disaster showed that when regulation becomes lenient on its enforcement of safety regulation and fails to keep safety as its top priority, disaster can occur like the one at Chernobyl, Ukraine in 1986.

Chernobyl is a symbol of the largest nuclear energy disaster in the history of mankind with some fatal consequences caused by the radiation spread from the explosion of the 4th unit of the Chernobyl power plant. The levels of radiation in the power plant and in the nearby areas (including the city of Pripyat) ranged from 0.1 to 300 Sieverts per hour (almost billion - 1,000,000,000 times more than the usual natural background radiation measured in microSieverts - μSv).

The 1986 accident at the Chernobyl nuclear power plant in Ukraine, then part of the former Soviet Union, is the only accident in the history of commercial nuclear power to cause fatalities from radiation. It was the product of a severely flawed Soviet-era reactor design, combined with human error.

Chernobyl Accident and Its Consequences

The term 'safety culture' was first used in the International Atomic Energy Agency (IAEA) 1986 report on Chernobyl. Safety culture was defined then as follows: "Safety culture is that assembly of characteristics and attitudes in organizations and individuals which establishes that, as an overriding priority, nuclear plant safety issues receive the attention warranted by their significance" (INSAG-1)
