The hitherto unknown history of the formation of ancient Indo-European verb roots and their primary derivatives. From which, with particular phonetic variants described herein, are derived, over thousands of years, the words of Sanskrit, Greek and Latin.

History of the words of the most ancient Indo-European vocabulary, which came into being thousands of years before the flowering of Greco-Roman civilization, and their transcription in Sanskrit, Greek and Latin. 12,000 entries.

Latin is one of the major ancient Indo-European languages and one of the cornerstones of Indo-European studies. Since the last comprehensive etymological dictionary of Latin appeared in 1959, enormous progress has been made in the reconstruction of Proto-Indo-European, and many etymologies have been revised. This new etymological dictionary covers the entire Latin lexicon of Indo-European origin. It consists of nearly 1900 entries, which altogether discuss about 8000 Latin lemmata. All words attested before Cicero are included, together with their first date of attestation in Latin. The dictionary also includes all the inherited words found in the other ancient Italic languages, such as Oscan, Umbrian and South Picene; thus, it also serves as an etymological dictionary of Italic.

The Old Frisian Etymological Dictionary is an indispensable research tool for the study of Old Frisian, Germanic languages, and Proto-Indo-European. With this first etymological dictionary of Old Frisian based on the lexicon of Riustring 1 manuscript, Old Frisian becomes accessible to a wide circle of scholars of Germanic and Indo-European. The latest insights of Comparative Indo-European Linguistics have been systematically incorporated. The entries are provided with a meticulous analysis of Old Frisian dialectal forms, with Proto-Frisian reconstructions, and with a wealth of Germanic and Indo-European cognates. Due to the lack of lexicographical tools, Old Frisian cognates are rarely included in current etymological dictionaries of Germanic and Indo-European, despite the fact that Old Frisian can often provide important clues for the reconstruction. At the same time, it is difficult for the students of Old Frisian to acquire knowledge of the linguistic prehistory of this language. The Old Frisian Etymological Dictionary is an indispensable research tool for the study of Old Frisian, Germanic languages, and Proto-Indo-European.

As an Indo-European language, Armenian has been the subject of etymological research for over a hundred years. There are many valuable systematic handbooks, studies and surveys on comparative Armenian linguistics. Almost all of these works, with a few exceptions, mostly concentrate on Classical Armenian and touch the dialects only sporadically. Non-literary data taken from Armenian dialects have largely remained outside of the scope of Indo-European etymological considerations. This book provides an up-to-date description of the Indo-European lexical stock of Armenian with systematic inclusion of dialectal data. It incorporates the lexical, phonetic, and morphological material in the Armenian dialects into the etymological treatment of the Indo-European lexicon. In this respect it is completely new.

This dictionary in the Leiden Indo-European Etymological Dictionary Series systematically and exhaustively deals with the Slavic inherited lexicon. It is unique in combining recent insights from the field of comparative Indo-European linguistics with modern Balto-Slavic accentology. In addition, the author makes an explicit attempt at reconstructing part of the Balto-Slavic lexicon. The entries of the dictionary are alphabetically arranged Proto-Slavic etyma. Each lemma consists of a number of fields which contain the evidence, reconstructions and notes. The introduction explains the contents and the significance of the individual fields. Here the reader can also find information on the various sources of the material. The volume concludes with an extensive bibliography of sources and secondary literature, and a word index.
