Digital technology will change the culture of the construction industry. ... a truly sustainable built environment is possible. The cover article looks at the 2019 JCT Povey Lecture by Professor Alan Pen, entitled Our Digital Future: Space and Place in a Digital World, which was delivered at the Local Government Association in November. ...

"In this book of thirteen chapters, Howard Davis uses historical, contemporary, and cross-cultural examples to describe the nature and influence of these cultures. He shows how building cultures reflect the general cultures in which they exist, how they have changed over history, how they affect the form of buildings and cities, and how present building cultures, which are responsible for the contemporary everyday environments, may be improved."--Jacket.

Construction is one of the largest and most people-intensive industrial sectors. In many countries, however, construction is also one of the most highly criticized in terms of its employment practices and industrial relations. People and culture are too often seen as variables that must be manipulated in the cause of improved productivity. This important new work provides an essential corrective to the current literature by focusing on people and culture rather than sector efficiency. It presents the latest thinking from a diversity of perspectives derived from a major ESRC seminar series and invited contributions from leading researchers. Its interdisciplinary approach draws together industry and research and is international in its relevance. Through several multidisciplinary themes, People and Culture in Construction: explores the industry's labour market and the major influences on employment patterns examines how to improve the image and reality of the construction sector as an employer looks at the forces shaping the industry and implications for its stability considers the current composition of the workforce and the potential impacts of workforce diversification analyzes the impact of government targets and policies on construction working practices and culture investigates how to address the skills shortfall currently affecting the industry's performance.

The author of this book aims to encourage an awareness of sustainability as it is implemented across all areas of planning and design, and the ability to think and act on this knowledge. This book will explore in genuine depth the sustainable strategies that could be applied, along with the practical work of key figures in the built environment, setting these against historical experiences and traditional cultures. It also aims to revive the discourse around these subjects. Achieving this will require the involvement of architects and structural, energy and environmental engineers, construction businesses and specialists, research institutes and universities. The five chapters and 333 show-cased projects reflect

important stages in the architectural and engineering-based design process, stages which need to be addressed when dealing with sustainable strategies in the built environment.

For years following reunification, Berlin was the largest construction site in Europe, with striking new architecture proliferating throughout the city in the 1990s and early 2000s. Among the most visible and the most contested of the new projects were those designed for the national government and its related functions. *Berlin Contemporary* explores these buildings and plans, tracing their antecedents while also situating their iconic forms and influential designers within the spectacular world of global contemporary architecture. Close studies of these sites, including the Reichstag, the Chancellery, and the reconstruction of the Berlin Stadtschloss (now known as the Humboldt Forum), demonstrate the complexity of Berlin's political and architectural "rebuilding" and reveal the intricate historical negotiations that architecture was summoned to perform.

More than three decades after its first publication, Edward Said's groundbreaking critique of the West's historical, cultural, and political perceptions of the East has become a modern classic. In this wide-ranging, intellectually vigorous study, Said traces the origins of "orientalism" to the centuries-long period during which Europe dominated the Middle and Near East and, from its position of power, defined "the orient" simply as "other than" the occident. This entrenched view continues to dominate western ideas and, because it does not allow the East to represent itself, prevents true understanding. Essential, and still eye-opening, *Orientalism* remains one of the most important books written about our divided world.

Chicken--both the bird and the food--has played multiple roles in the lives of African American women from the slavery era to the present. It has provided food and a source of income for their families, shaped a distinctive culture, and helped women define and exert themselves in racist and hostile environments. Psyche A. Williams-Forsen examines the complexity of black women's legacies using food as a form of cultural work. While acknowledging the negative interpretations of black culture associated with chicken imagery, Williams-Forsen focuses her analysis on the ways black women have forged their own self-definitions and relationships to the "gospel bird." Exploring material ranging from personal interviews to the comedy of Chris Rock, from commercial advertisements to the art of Kara Walker, and from cookbooks to literature, Williams-Forsen considers how black women arrive at degrees of self-definition and self-reliance using certain foods. She demonstrates how they defy conventional representations of blackness and exercise influence through food preparation and distribution. Understanding these complex relationships clarifies how present associations of blacks and chicken are rooted in a past that is fraught with both racism and agency. The traditions and practices of feminism, Williams-Forsen argues, are inherent in the foods women prepare and serve.

Buildings have often been studied whole in space, but never before have they been studied whole in time. *How Buildings Learn* is a masterful new synthesis that proposes that buildings adapt best when constantly refined and reshaped by their occupants, and that architects can mature from being artists of space to becoming artists of time. From the connected farmhouses of New England to I.M. Pei's Media Lab, from "satisficing" to "form follows funding," from the evolution of bungalows to the invention of Santa Fe Style, from Low Road military surplus buildings to a High Road English classic like Chatsworth--this is a far-ranging survey of unexplored essential territory. More than any other human artifacts, buildings improve with time--if they're allowed to. *How Buildings Learn* shows how to work with time rather than against it.

Building Culture describes how cultural buildings are conceived and procured, through a review of data, case studies and interrogation of the processes - an invaluable resource for anyone commissioning arts and cultural buildings in the UK. *Building Culture* is a uniquely comprehensive investigation that offers research, guidance, analysis of Covid impacts and recommendations for communities, arts professionals, commissioners, clients, architects, project teams and policy makers for future best practice. *Building Culture* contains:

- Contributions by eminent architects, competition programmers and a client
- Unique data analysis of the procurement processes of the sector
- Arts funding guidance and procurement analysis
- Resources and references.

Building Culture looks at the procurement data for 421 arts and heritage capital projects across the UK between 2013 and 2018 to establish what procurement route was taken, what guidance was provided and by whom, who were the consultants appointed, some examples of best practice and some less good, and lessons learnt. Based on this evidence and previous research, *Building Culture* then makes recommendations for the key funding bodies and those advising or undertaking arts and heritage capital procurement and projects. In order to understand the landscape of arts and cultural buildings and their procurement it has also been required to understand the funding ecology and specifically that of the national arts funding bodies. This is seen in the light of the current context as the sector responds to Covid, Brexit, austerity and the future challenges of a Climate Emergency. "Building Culture is a comprehensive survey and commentary of the processes and power of cultural development and its reach across the United Kingdom. The authors ... then present some of the urgent and important challenges and issues of our time ... expertly framed through a diverse set of exemplar projects as case studies ... situated ... within the complex ... world of planning, policy, and funding regimes. The result will prove an essential resource to students, practitioners and others looking to understand the world of cultural development with all its many challenges and opportunities ... The recommendations the authors present to us here are central to a dialogue which is much needed about the values and principles needed for our society in the future." Donald Hyslop, Chair of Creative and Cultural Skills UK. "This in-depth study of how cultural spaces are conceived and procured is hugely valuable to clients and design teams who often work in seeming isolation creating and adapting projects ... It is especially

valuable as returning from the pandemic we can appreciate the strategic and symbolic significance of cultural spaces and their role in coalescing places and sustaining relationships between people. The impressive depth and span of evidence gathered demonstrates how we could invest more wisely with a greater common understanding of the processes that prepare the ground for inspiring, robust and sustainable cultural buildings. The case studies demonstrate how this is done well.” Juliet Bidgood, Architect and RIBA Client Adviser.

History of Construction Cultures Volume 1 contains papers presented at the 7ICCH - Seventh International Congress on Construction History, held at the Lisbon School of Architecture, Portugal, from 12 to 16 July, 2021. The conference has been organized by the Lisbon School of Architecture (FAUL), NOVA School of Social Sciences and Humanities, the Portuguese Society for Construction History Studies and the University of the Azores. The contributions cover the wide interdisciplinary spectrum of Construction History and consist on the most recent advances in theory and practical case studies analysis, following themes such as: - epistemological issues; - building actors; - building materials; - building machines, tools and equipment; - construction processes; - building services and techniques ; -structural theory and analysis ; - political, social and economic aspects; - knowledge transfer and cultural translation of construction cultures. Furthermore, papers presented at thematic sessions aim at covering important problematics, historical periods and different regions of the globe, opening new directions for Construction History research. We are what we build and how we build; thus, the study of Construction History is now more than ever at the centre of current debates as to the shape of a sustainable future for humankind. Therefore, History of Construction Cultures is a critical and indispensable work to expand our understanding of the ways in which everyday building activities have been perceived and experienced in different cultures, from ancient times to our century and all over the world.
