The focal point of the book
"Denial" (suggesting that
self-deception was the
essential ingredient in our
evolutionary development to
gain the intelligence that
sets us apart from other
animals), is in itself
simple and could have been
covered much more
succinctly.

Abounds with momentous theories that disrupted conventional wisdom and yet were eventually proven true. Ajit Varki and Danny Brower's "Mind over Reality" theory is poised to be one such idea—a concept that runs counter to commonly-held notions about human evolution but that may hold the key to understanding why humans evolved as we did, leaving all other related species far behind. At a chance meeting in 2005, Brower, a geneticist, posed an unusual idea to Varki that he believed could explain the origins of human uniqueness among the world's species: Why is there no

evolutionary opportunity?
Why is it that humans alone
can understand the minds of
others? Haunted by their
encounter, Varki tried years
later to contact Brower only
to discover that he had died
unexpectedly. Inspired by an
incomplete manuscript Brower
left behind, Denial presents
a radical new theory on the
origins of our species. It
was not, the authors argue,
a biological leap that set
humanity apart from other
species, but a psychological
one: namely, the uniquely

inarguable evidence- including the willful ignorance of our own inevitable deaths. The awareness of our own mortality could have caused anxieties that resulted in our avoiding the risks of competing to procreate-an evolutionary dead-end. Humans therefore needed to evolve a mechanism for overcoming this hurdle: the denial of reality. As a consequence of this evolutionary quirk we now deny any aspects of reality that are not to our liking- we smoke cigarettes, eat unhealthy foods, and avoid exercise, knowing these habits are a prescription

And The early death. And so what has worked to establish our species could be our undoing if we continue to deny the consequences of unrealistic approaches to everything from personal health to financial risk-taking to climate change. On the other hand reality-denial affords us many valuable attributes, such as optimism, confidence, and courage in the face of long odds. Presented in homage to Brower's original thinking, Denial offers a powerful warning about the dangers inherent in our remarkable ability to ignore reality-a gift that will either lead to our downfall, or continue

People believe what they want to believe. It is a striking-yet all too familiar-fact about human beings that our belief-forming processes can be so distorted by fears, desires, and prejudices that an otherwise sensible person may sincerely uphold a false claim about the world despite overwhelming evidence to the contrary. When we describe someone as being "in denial," we mean that he or she is personally threatened by some set of

facts and consequently fails to assess the situation properly according to the evidence, instead arguing and interpreting evidence in light of a pre-established conclusion. In a world polarized over politics, culture, race, and religion, it is evident that ideological commitments can influence one's perception of reality in socially destructive ways, especially when one perceives a threat to these commitments. When group interests, creeds, or dogmas are threatened by unwelcome factual information, biased thinking can become ideological denialism. This is a problem

that affects everybody:

Whereas denial can interfere with individual well-being, ideological denialism can stand in the way of urgent advancements in public policy. This book offers an accessible, historically and scientifically informed overview of our understanding of denial and denialism. Adrian Bardon introduces the reader to the latest developments in the interdisciplinary study of denial, and then investigates the role of human psychology and ideology in, respectively, science denial, economic policy, and religious belief.

From the Pulitzer Prize-winning journalist and author of *Why We Make Mistakes*, an illuminating exploration of human beings' astonishing ability to deceive themselves. To one degree or another, we all misjudge reality. Our perception—of ourselves and the world around us—is much more malleable than we realize. It shows, for instance, just how much the power of many modern medicines, particularly antidepressants and painkillers, is largely in our heads. Placebos in modern-day life extend beyond hospitals, to fake thermostats and “elevator close” buttons that don’t really work...but give the perception that they do. *Kidding Ourselves* brings together a variety of subjects, linking seemingly unrelated ideas in fascinating and unexpected ways. And ultimately, it shows that deceiving
