This Adobe-approved, project-based guide from one of the world's most popular web design authors, David Powers, will teach readers how to progress from designing static websites to building dynamic websites in Adobe Dreamweaver CS5. Using step-by-step instructions with projects that build on the knowledge acquired in each lesson, readers will learn about the new PHP features in Dreamweaver CS5, including the ability to work in Live View with WordPress, as well as extended support for PHP code hints, syntax checking, and dynamically related files. Readers will learn how to upload images and send email with attachments using the Zend Framework. In contrast to existing books on the Zend Framework, this book will show web designers and developers with little or no programming experience how to use selected modules to integrate dynamic features into existing sites. There is a strong emphasis on following security best practices. Readers will also learn progressive enhancement techniques for updating pages seamlessly with PHP and Ajax. All of Peachpit's eBooks contain the same content as the print edition. You will find a link in the last few pages of your eBook that directs you to the media files. Helpful tips: If you are able to search the book, search for "Where are the lesson files?" Go to the very last page of the book and scroll backwards. You will need a web-enabled device or computer in order to access the media files that accompany this ebook. Entering the URL supplied into a computer with web access will allow you to get to the files. Depending on your device, it is possible that your display settings will cut off part of the URL. To make sure this is not the case, try reducing your font size and turning your device to a landscape view. This should cause the full URL to appear.
