## **Potential Wmkw**

From a few practical considerations, a procedure has been developed for assessing the geothermal energy potential of abandoned underground coal mines, as well as for quantifying the reduction in CO<sub>2</sub> emissions associated with using the mines instead of conventional

File Type PDF

Geothermal

heating/cooling technologies. On this basis the authors have been able to estimate that the geothermal energy available from underground coal mines in Europe is on the order of several thousand megawatts thermal.

**study to support ...**

Geothermal energy is one of the cleanest forms of energy now available in commercial quantities. Use of geothermal energy avoids the problems of acid rain and greatly reduces greenhouse gas emissions and other forms of air pollution. Potentially hazardous elements produced in

File Type PDF

Geothermal

geothermal brines are usually injected back into the producing reservoir.
