Implant And Transplant Surgery

A dental implant procedure is performed by inserting artificial tooth roots. These implants bond with your jawbone, allowing the dentist or oral surgeon to place replacement teeth called crowns. Dental implants can be an option if you have one or more missing permanent teeth. They're made to look, feel, and function like your natural teeth. ? ?

Dental Implant Procedure: Preparation, Recovery, Long-Term ...

A dental implant is a long-term solution for replacing missing teeth. Your dentist places them directly into your jawbone, where they provide an artificial replacement for the root of your missing tooth or teeth. They can support crowns or dentures, in a similar way that roots support natural teeth.

Dental implants are also made from high-quality materials. The fixture and abutment (which is screwed into the implant to support the crown) are made of titanium alloy, whilst the crown is made from porcelain or ceramic to get the natural finish of a tooth, and a denture usually of acrylic.

How much do dental implants cost? - Bupa UK

The idea behind implants is to enhance standard glaucoma surgery by positioning a device that will help keep the surgically-created drainage opening from healing and closing down. Many current implants include a tube through which the aqueous fluid passes. Others are solid and promote the flow of fluid along the surface of the implant.
