This selection may not include MATH 3700.03: Mathematics for Economists, MATH 3800.03: Financial Economics. Students wishing to concentrate in Applied Mathematics should choose the additional MATH ...

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand.We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand—and apply—key concepts.

This is an essential book for everyone who wants to write clearly about any subject and use writing as a means of learning.

Twenty-three stimulating papers, including essays by Peter Elbow, Donald Murray, and William Strong, selected from the more than sixty presented at the Second Miami University Conference on Sentence Combining and the Teaching of Writing. Sentence combining has not only survived the paradigm shift in the teaching of writing but continues to stimulate provocative, creative thinking about the writing process itself. No longer an end in itself, but a tool, sentence combining has become a method of teaching about ways of thinking, of perceiving, and of organizing reality.

This e-book offers an insightful look into the way today's students think about and use technology in their academic and social lives. It will help institutional leaders help their students to become more successful and satisfied.

CONFESSIONS OF A SERIAL SONGWRITER

Introductory Business Statistics is designed to meet the scope and sequence requirements of the one-semester statistics course for business, economics, and related majors. Core statistical concepts and skills have been augmented with practical business examples, scenarios, and exercises. The result is a meaningful understanding of the discipline, which will serve students in their business careers and real-world experiences.

"The study of acting should not begin with an exploration of feeling, perception, imagination, memories, intention, personalization, self-identification... or even performance—but physical action." Michael Lugering's The Expressive Actor presents a foundational, preparatory training method, using movement to unlock the entire acting process. Its action-based perspective integrates voice, movement and basic acting training into a unified approach. A wealth of exercises and diagrams guide the reader through this internationally taught program, making it an ideal step-by-step course for both solo and classroom use. Through this course, voice and body training becomes more than a simple skill-building activity – it is the central prerequisite to any actor training. This new Routledge edition has been fully updated, to include: A revised prologue, further discussing the historical and philosophical grounding of The Lugering Method A new introduction, with particular focus on the integrative nature of the method and how the book should be used. New developments, clarifications, and 12 new exercises. 6 new illustrative diagrams.

A collection of brilliant essays by international scholar-activists, examining concepts and practices from diverse contexts. A must-read for anyone interested in using their teaching, research and action to build a more just society. Mary Romero, Professor of Justice Studies and Social Inquiry, Arizona State University This volume superbly conceptualises and contextualises social justice in and for our global age. The stellar cast of sociologists connect concepts to practices and outline the challenges we face, as well as providing necessary responses. Gurminder K Bhambra, Professor of Postcolonial and Decolonial Studies, University of Sussex This impressive collection reinvigorates the criticality of the social in sociology. It reconceptualises social justice as a centre of sociological action. The book reminds us that it is not enough for sociology to offer insights, it must take the lead in championing change at the global, national, and local levels. Maggie Walter, Professor of Sociology, University of Tasmania An excellent set of chapters bringing to the fore new perspectives on the social injustices and inequalities facing a world in crisis. The book is theoretically and empirically rigorous and integrates compelling scenarios from various parts of the world. Kamilla Naidoo, Professor of Sociology, University of Johannesburg Sociology and Social Justice contributes to a much-needed conversation on the relevance and necessity for sociologists to play an influential role in addressing the many social justice concerns of the 21st century. Using contextual global sociology, Sociology and Social Justice explores: • historic and contemporary sites and contexts around the world • sociological insights on topics ranging from social movements, to cyber space. • International struggles, processes, and outcomes Written by distinguished international scholars, this is an essential text for those looking at issues of: Human Rights, Public Sociology, Democratization, Gender, and Globalization.
