The first volume in the "What Do I Do Now?: Emergency Medicine" series, Pediatric Medical Emergencies uses a case-based approach to cover common and important topics in the examination, investigation, and management of acutely ill children. Each chapter provides a discussion of the diagnosis, key points to remember, and selected references for further reading. Areas of controversy are clearly delineated with a discussion regarding evidence-based options and a balanced view of treatment and disposition decisions. The book addresses a wide range of topics including neonatal fever, pediatric sepsis, intussusception, and more, and is suited for emergency medicine providers and pediatricians. Pediatric Medical Emergencies is an engaging collection of thought-provoking cases which clinicians can utilize when they encounter difficult pediatric patients. The volume is also a self-assessment tool that tests the reader's ability to answer the question, "What do I do now?"

Simulation facilities are invaluable for training in medicine and clinical education, biomedical engineering and life sciences. They allow the practice of prevention, containment, treatment, and procedure in a risk-free setting. This book is a practical guide and reference to the latest technology, operations and opportunities presented by clinical simulation. It shows how to develop and make efficient use of resources, and provides hands-on information to those tasked with setting up and delivering simulation facilities for medical, clinical and related purposes, and the development and delivery of simulation-based education programs. A step-by-step manual to developing successful simulation programs Shows how to design, construct, outfit and run simulation facilities for clinical education and research. The Residency Review Committee of the US Accreditation Council on Graduate Medical Education has begun requiring residency programs to have simulation as an integral part of their training programs.

Offers instructions on caring for a dog in the event of an emergency, covering topics ranging from approaching and restraining an injured dog to treating choking, shock, pad wounds, bloat, heat stroke, sprains, and seizures.

Instructor CD contents include: Precourse materials -- Course materials -- Evaluation materials -- Resources.

Updated to reflect the new 2005 emergency cardiovascular care guidelines! Popular author, Barbara Aehlert, incorporates both prehospital and hospital management of pediatric emergencies. In a concise, easy-to-read outline format, it provides the most essential information a provider needs. It is also the approved text for the American Safety & Health Institute's (ASHI) pediatric advanced life support course. For more information on ASHI courses, call 800-246-5101 or visit www.ashinstitute.org. Instructor resources available; contact your sales representative for details. An outline format featuring bulleted lists, concise tables, and a user-friendly writing style makes this comprehensive text incredibly easy to read and understand. A Pretest and a Posttest consisting of multiple choice, true/false, fill in the blank, and essay questions tests readers' overall comprehension of the material. Updated to reflect the new 2005 emergency cardiovascular care guidelines. PALS Pearl Boxes help readers apply information covered in the text to real-life clinical situations. Sidebars contain additional information relevant to the topics covered in the chapter, giving readers an opportunity for further learning. A laminated quick reference card gives practitioners easy access to critical information in the field or hospital. This convenient card includes essential information regarding respiratory and heart rates, blood pressure, basic life support interventions, Glasgow Coma Scale, airway size and equipment selection for intubation corresponding to

the Broselow Resuscitation Tape, several pediatric algorithms, and pain assessment tools.

Established since 1986 as the definitive text and reference on use of radiation therapy for childhood cancer, *Pediatric Radiation Oncology* is now in its thoroughly revised and updated Fifth Edition. This edition reviews all significant recent clinical trials—including, for the first time, significant European clinical trials—and provides increased coverage of international and Third World issues. The latest cancer staging guidelines are included. New chapters cover psychosocial aspects of radiotherapy for the child and family and medical management of pain, nausea, nutritional problems, and blood count depression in the child with cancer. This edition also has full-color illustrations throughout. A companion website includes the full text and an image bank.

Mastering ACLS, Second Edition will help health care professionals successfully complete the American Heart Association's Advanced Cardiac Life Support course and certification exam. This quick-review outline-format study guide covers the core knowledge and skills needed for ACLS—including detailed, illustrated life support techniques, core case studies, arrhythmias, defibrillation procedures, I.V. techniques, cardiovascular pharmacology, myocardial infarction, and special resuscitation situations. Now in full color, this edition features 200 illustrations and algorithms, expanded chapter quizzes, a comprehensive test, expanded information on automated external defibrillators, and additional case scenarios in the Megacode and other chapters. A new appendix reviews Basic Cardiac Life Support guidelines.

Essentials of Emergency Medicine, Second Edition, provides physicians and medical residents with a comprehensive reference guide to the practice of emergency medicine in clinical settings.

Providing the most comprehensive coverage available on nursing care of the pediatric trauma patient, this practical reference discusses pediatric trauma across the continuum of care. Its broad perspective enables the use of a systems approach - consistent with the current health care environment. Four convenient sections provide in-depth, comprehensive coverage of critical information for nurses caring for the pediatric trauma patient. Comprehensive content focuses specifically on nursing care of the pediatric trauma patient. The nurse's role in the continuum of care is consistent with the emphasis of the current healthcare environment. The organizational framework focuses on the systems approach and is divided into four sections. The section on The Scope of Pediatric Trauma covers issues such as epidemiology, prevention, outcomes management, and ethical issues. The Clinical Concepts section addresses mechanism of injury, pre-hospital care, initial resuscitation, rehabilitation, pain management, nutrition, family-centered care, and violence. The section on System Injuries covers specific body system issues. The section on Multisystem Issues covers thermal and submersion injuries as well as the unborn infant as trauma victim and sequellae of trauma. Independent and collaborative nursing interventions are emphasized in the System Injuries section. Timely issues such as outcomes management are discussed. Chapters written by nurses practicing in pediatric trauma ensure clinically relevant, up-to-date content.
