Had this TV for just over a week, all i can say is that it is awesome. I considered many TV's at this size (40"-42"), you have some compelling offerings from LCD with Sony and Samsung leading the way, and plasma with Panasonic, Samsung and Pioneer if you want to spend a little more money. The big debates were as follows : - Standard Definition TV.

his nose out of his books and enter into an alliance with House Morningstar, and a dangerous mission to save his world. The covert assassin. Lady Andelynn Harrow isn't House Morningstar's eldest or prettiest daughter, but she is the deadliest. After her father's murder, Andee must defend her new house and mate--the shy, reluctant Galen--but every battle risks revealing her terrible secret. The escaped slave. Malcolm gets his first taste of freedom when the Cy'ren recruit him to locate the cure to a deadly virus--and feels the burn of desire for Galen, the lord he can never have, and for

A timely and authoritative guide to the state of the art of wave scattering Scattering of Electromagnetic Waves offers in three volumes a complete and up-to-date treatment of wave scattering by random discrete scatterers and rough surfaces. Written by leading scientists who have made important contributions to wave scattering over three decades, this new work

explains the principles, methods, and applications of this rapidly expanding, interdisciplinary field. It covers both introductory and advanced material and provides students and researchers in remote sensing as well as imaging, optics, and electromagnetic theory with a one-stop reference to a wealth of current research results. Plus, Scattering of Electromagnetic Waves contains detailed discussions of both analytical and numerical methods, including cutting-edge techniques for the recovery of earth/land parametric information. The three volumes are entitled respectively Theories

The heat equation can be derived by averaging over a very large number of particles.

Traditionally, the resulting PDE is studied as a deterministic equation, an approach that has brought many significant results and a deep understanding of the equation and its solutions. By studying the heat equation and considering the individual random particles, however, one gains further intuition into the problem. While this is now standard for many researchers, this approach is generally not presented at the undergraduate level. In this book, Lawler introduces the heat equations and the closely related notion of harmonic functions from a probabilistic perspective. The theme of the first two chapters of the

book is the relationship between random walks and the heat equation. This first chapter discusses the discrete case, random walk and the heat equation on the integer lattice; and the second chapter discusses the continuous case, Brownian motion and the usual heat equation. Relationships are shown between the two. For example, solving the heat equation in the discrete setting becomes a problem of diagonalization of symmetric matrices, which becomes a problem in Fourier series in the continuous case. Random walk and Brownian motion are introduced and developed from first principles. The latter two chapters

discuss different topics: martingales and fractal dimension, with the chapters tied together by one example, a random Cantor set. The idea of this book is to merge probabilistic and deterministic approaches to heat flow. It is also intended as a bridge from undergraduate analysis to graduate and research perspectives. The book is suitable for advanced undergraduates, particularly those considering graduate work in mathematics or related areas.

A sudden love affair with fragrance leads to sensual awakening, self-transformation, and an unexpected homecoming At thirty-six—earnest, bookish, terminally shopping averse—Alyssa Harad thinks she knows herself. Then one day she stumbles on a perfume review blog and, surprised by her seduction by such a girly extravagance, she reads in secret. But one trip to the mall and several dozen

perfume samples later, she is happily obsessed with the seductive underworld of scent and the brilliant, quirky people she meets there. If only she could put off planning her wedding a little longer. . . . Thus begins a life-changing journey that takes Harad from a private perfume laboratory in Austin, Texas, to the glamorous fragrance showrooms of New York City and a homecoming in Boise, Idaho, with the women who watched her grow up. With warmth and humor, Harad traces the way her unexpected passion helps her open new frontiers and reclaim traditions she had rejected. Full of lush description,

this intimate memoir celebrates the many ways there are to come to our senses.

In the mid-1990s, astronomers made history when they began to find planets orbiting stars in the Milky Way. More than eight hundred planets have been found since then, yet none of them is anything like Earth and none could support life. Now, armed with more powerful technology, planet hunters are racing to find a true twin of Earth. Science writer Michael Lemonick has unique access to these exoplaneteers, as they call themselves, and *Mirror Earth* unveils their passionate
