~~What is Sampling in Archaeology – ThoughtCo~~

Book description. The first overview of sampling for archaeologists for over twenty years, this manual offers a comprehensive account of the applications of statistical sampling theory which are essential to modern archaeological practice at a range of scales, from the regional to the microscopic.

~~Sampling in Archaeology by Clive Orton – Cambridge Core~~

Sampling in Archaeology is the only up-to-date and comprehensive account of the techniques of sampling which are essential to modern archaeological practice. It incorporates the latest developments in statistical sampling theory, and can easily be understood by students and scholars of archaeology.

~~Sampling in Archaeology (Cambridge Manuals in Archaeology) –~~

There are four main probabilistic sampling techniques used by archaeologists and they all sound confusing and overwhelming so let's try and get through it together. Simple Random Sampling: This is used in order to understand the site as a whole, not just the areas where we know something will be found. Usually the areas to be sampled are chosen at random using a table of random numbers.

ods based in probability theory are commonly used in archaeology: simple random sampling, systematic random sampling, stratified sampling, and cluster sampling. These methods all produce samples a...

~~(PDF) Sampling in archaeology – ResearchGate~~

sampling in an archaeological setting. According to Orton (2000), the term site has many meanings. Orton states that for a development site, the goal is to detect the presence and extent of any significant archaeological remains, and to either record them before damage or destruction, or to mitigate the damage by redesign of the proposed development.

~~Sampling in Archaeology – Orton, Clive | 9780521562263 –~~

For completeness, we define each of the four sampling techniques and comment on the use of each technique in the sampling of archaeological sites. Simple random sampling is the foundation for all of the sampling techniques. Simple random sampling is such that each possible sample of size n units has an equal chance of being selected.
