Hoffman throws new light on Freud by examining in depth the intense and often venomous relationship that existed between the two men - revealing both Freud's misuse of power and Adler's courage in defying both Freud and his powerful circle to begin his own school of thought.

Albert Ellis was one of the most influential psychotherapists of all time, revolutionizing the field through his writings, teachings, research, and supervision for more than half a century. He was a pioneer whose ideas, known as Rational Emotive Behavior Therapy (REBT), formed the basis of what has now become known as Cognitive Behavior Therapy (CBT), the most widely accepted psychotherapeutic approach in the world. This book contains some of Ellis ’ most influential writings on a variety of subjects, including human sexuality, personality disorders, and religion, with introductions by some of today ’ s contemporary experts in the psychotherapy field. The 20 articles included capture Ellis ’ wit, humor, and breadth of knowledge and will be a valuable resource for any mental health professional for understanding the key ingredients needed to help others solve problems and live life fully.

Alfred Adler was one of the most influential thinkers in psychotherapy – a physician, psychiatrist, author, and professor who wanted to answer the questions that plagued people during a significant time in history. His original ideas serve as a foundation for most modern theories of counseling and psychotherapy, ideas and writings that are brought back to life in this volume. Within, contemporary experts comment and introduce Adler's work through the lens of the 21st century. In doing so, they pay tribute to, analyze, and disseminate his classic, seminal papers that have significantly impacted the therapy field. The 23 papers included were chosen because of their relevance to today's issues, and their importance in Adlerian theory and practice. They detail the core elements of his theory, the tactics he used to advocate change in individuals and systems, and emphasize how contemporary his ideas are. Alfred Adler Revisited not only plays homage to a great professional, it revives his ideas and encourages debate over fundamental human issues.

Continuing the incredible popularity of Alfred's Basic Adult Piano Course, this new book adapts the same friendly and informative style for adults who wish to teach themselves. With the study guide pages that have been added to introduce the music, it's almost like having a piano teacher beside you as you learn the skills needed to perform popular and familiar music. There are also five bonus pieces: At Last + Have Yourself a Merry Little Christmas + Laura + Over the Rainbow + Singin' in the Rain. Included is a recording containing the piano part and an engaging arrangement for each of the 65 musical examples. 192 pages.

Self-control has gained enormous attention in recent years both in philosophy and the mind sciences, for it has profound implications on so many aspects of human life. Overcoming temptation, improving cognitive functioning, making life-altering decisions, and numerous other challenges all depend upon self-control. But recent developments in the philosophy of mind and in action theory, as well as in psychology, are now testing some of the assumptions about the nature of self-control previously held on purely a priori grounds. New essays in this volume offer fresh insights from a variety of angles: neuroscience; social, cognitive, and developmental psychology; decision theory; and philosophy. While much of the literature on self-control is spread across distinct disciplines and journals, this volume presents for the first time a thorough and truly interdisciplinary exploration of the topic. The essays address four central topics: what self-control is and how it works; temptation and goal pursuit; self-control, morality, and law; and extending self-control. They take up an array of complex and important questions. What is self-control? How is self-control related to willpower? How does inhibitory control work? What are the cultural and developmental origins of beliefs about self-control? How are attempts at self-control hindered or helped by emotions? How do our beliefs about our own ability to deal with temptation influence our behavior? What does the ability to avoid temptation depend on? How should juvenile responsibility be understood, and how should the juvenile justice system be reformed? Can an account of self-control help us understand free will? Combining the most recent scientific research with new frontiers in the philosophy of mind, this volume offers the most definitive guide to self-control to date.

Ivan Korskic and Bobby Zane couldn't be more different—they come from different backgrounds, different lifestyles, and they have very different values and ways of looking at the world and dealing with people. Yet they both have the drive, determination, and commitment to self-sacrifice necessary to become a champion. In the end, though, only one will stand in the center of the mat with his arms raised in victory. Has each boy prepared enough? Sacrificed enough? Does each want to win enough? All the training, pain, running, and cutting weight ultimately comes down to a few short minutes on a wrestling mat—leaving one boy the victor, the other devastated.

New translations of Alfred Adler's early (1898-1909) journal articles and his classic work (1907) on organ inferiority.

Self-deception raises complex questions about the nature of belief and the structure of the human mind. In this book, Alfred Mele addresses four of the most critical of these questions: What is it to deceive oneself? How do we deceive ourselves? Why do we deceive ourselves? Is self-deception really possible? Drawing on cutting-edge empirical research on everyday reasoning and biases, Mele takes issue with commonplace attempts to equate the processes of self-deception with those of stereotypical interpersonal deception. Such attempts, he demonstrates, are fundamentally misguided, particularly in the assumption that self-deception is intentional. In their place, Mele proposes a compelling, empirically informed account of the motivational causes of biased beliefs. At the heart of this theory is an appreciation of how emotion and motivation may, without our knowing it, bias our assessment of evidence for beliefs. Highlighting motivation and emotion, Mele develops a pair of approaches for explaining the two forms of self-deception: the "straight" form, in which we believe what we want to be true, and the "twisted" form, in which we believe what we wish to be false. Underlying Mele's work is an abiding interest in understanding and explaining the behavior of real human beings. The result is a comprehensive, elegant, empirically grounded theory of everyday self-deception that should engage philosophers and social scientists alike.

At the time of his death in 1998, Alfred Kazin was considered one of the most influential intellectuals of postwar America. What is less well known is that Kazin had been contributing almost daily to an extensive private journal, which arguably contains some of his best writing. These journals collectively tell the story of his journey from Brooklyn's Brownsville neighborhood to his position as a dominant figure in twentieth-century cultural life. To Kazin, the daily entry was a psychological and spiritual act. To read through these entries is to reexperience history as a series of daily discoveries by an alert, adventurous, if often mercurial intelligence. It is also to encounter an array of interesting and notable personalities. Sketches of friends, mistresses, family figures, and other intellectuals are woven in with commentary on Kazin's childhood, early religious interests, problems with parents, bouts of loneliness, dealings with publishers, and thoughts on the Holocaust. The journals also highlight his engagement with the political and cultural debates of the decades through which he lived. He wrestles with communism, cultural nationalism, liberalism, existentialism, Israel, modernism, and much more.Judiciously selected and edited by acclaimed Kazin biographer Richard Cook, this collection provides the public with access to these previously unavailable writings and, in doing so, offers a fascinating social, historical, literary, and cultural record.

Originally published in 1930, this title looks at the education of children. Adler believes the problems from a psychological point of view are the same as for adults, that of self-knowledge and rational self-direction. However, the difference being that due to the ' immaturity of children, the question of guidance – never wholly absent in the case of adults – takes on supreme importance. ' The title starts by presenting the Individual Psychology viewpoint as a whole, with the later chapters undertaking to tackle in more depth the various interrelated problems of children ’ s education.
