In Water from a Deep Well, Gerald Sittser opens to us the rich history of spirituality, letting us gaze at the practices and stories of believers from the past who had the same thirst for God that we do today. As we see their deep faith through his vibrant narratives, we may discover that old ways can bring new life to our own spirituality.

Deep Wells A deep well system consists of an array of bored wells pumped by submersible pumps. Pumping from each well lowers the groundwater level and creates a cone of depression or drawdown around itself. Several wells acting in combination can lower groundwater level over a wide area beneath an excavation.

~~Deep Wells | Groundwater Engineering~~

Water quality in a deep well usually changes more slowly than in a shallow well. That's because groundwater does some mixing as it moves through the aquifer. A spill a mile away from your deep well in the sand and gravel aquifer might be substantially diluted with clean recharge water before it gets to your well.

Water From a Deep Well is a good book for a time when some evangelicals seem intent on de-rooting themselves from their family tree. (Matthew P. Ristuccia, WORLD Magazine, Nov. 29/Dec 6, 2008) Even if we cannot be a Saint Francis or a monk, there are lessons to be learned from reading about our predecessors in the Christian faith.

During the year, the water table will fluctuate up and down in the well in response to seasonal precipitation in the area and local ground water use. The well must therefore be drilled deeper than the lowest expected elevation of the water table. Water level fluctuations may occur over several years if there have been drought conditions.

~~HOW DEEP SHOULD MY WELL BE? | American Ground Water Trust~~

A well is an excavation or structure created in the ground by digging, driving, or drilling to access liquid resources, usually water. The oldest and most common kind of well is a water well, to access groundwater in underground aquifers. The well water is drawn up by a pump, or using containers, such as buckets, that are raised mechanically or by hand. Water can also be injected back into the aquifer through the well. Wells were first constructed at least eight thousand years ago and historical

Driven wells are cased continuously and shallow (approximately 30 to 50 feet deep). Though driven wells are cased, they can be contaminated easily because they draw water from aquifers near the surface. These wells draw water from aquifers near the surface. Drilled wells are constructed by percussion or rotary-drilling machines.

When you provide a deep-water well, you give the gift of clean water to around 70 people affected by drought, ensuring they no longer go thirsty and can grow and water crops to feed their families. You'll also help to protect them against unclean water, waterborne diseases, and the spread of COVID-19.

~~Deep water well | Human Appeal~~

Rain and snowmelt can add water to aquifers, raising water levels. Periods of drought with no recharge will lead to falling water levels as ground water moves slowly to discharge points such as springs and rivers or is used by deep rooted vegetation. The water level in wells near the coast may be slightly influenced by tides.

~~WATER LEVEL IN WELLS | American Ground Water Trust~~

Deep Well Submersible Pumps only need to be primed once because they are submerged in the water being pumped and avoid pump cavitation, which damages the pump and decreases performance. Deep Well Pumps can be used in wells as deep as 300' below ground and work by pushing the fluid to the surface of the well.

~~Deep Well Submersible Pumps | Water Pumps Direct~~

A deep well is a sunken wellbore (borehole) extending more than 25 feet underground used to extract water, crude oil or other natural resources. Deep wells require stronger pumps than shallow wells. Corrosionpedia explains Deep Well Deep wells can be problematic because they are 25 feet in depth or more.

~~What is a Deep Well? | Definition from Corrosionpedia~~

It uses a simple system of pipes that begin from the water source which is the deep well, then it is gathered to a water reservoir that's usually a water tank that is then connected to your typical household or building plumbing. Since the water source is from deep beneath the ground, a pump is required to move the water to the tank.
